

## ***General Meeting of February 5<sup>th</sup> – comments.***

Steve Wawrykow used Windows Movie Maker with a selection of video clips and still shots to show us to make a movie type presentation. He took a few images of the members present – without payment I might add – to use in his demonstration. He mentioned this program was available and FREE in your , Windows O/S, always a valuable point with everyone and said it was a good tool to use - it

was not included in Windows 95 however!!! . As he always does, he made using the program look very easy and speedily produced a very attractive demo file to transfer to DVD or send over the Internet.

As he proceeded many members present asked questions and contributed their knowledge to his efforts. Many present had or were using this program and expressed their approval with its intuitive features. Sound could be added easily as could attractive headings and comments. Steve showed that adding of music made an appreciable addition to the final product.

Whilst this program was not as fully featured as Pinnacle Ver 12, which was demonstrated last month, it nevertheless should be considered before purchasing the more elaborate program. Once again, we owe a vote of thanks to Steve for a very informative and entertaining evening.
